

Okanogan Flora Checklist July, 2013 Compiled by G. Wooten, Twisp

This documents lists plant species found in Okanogan County, Washington. Nomenclature follows the Integrated Taxonomic Information System (ITIS) or Flora of North America, when available, with preference for the latter. Synonyms follow the accepted names.

Taxa are sorted phylogenetically by group and alphabetically within groups.

The phylogenetic groups are listed in the following order:

- Equisetopsida > Psilotopsida > Lycopodiopsida > Polypodiopsida > Gymnospermae >
- Monocotyledons (Alismatales > Poales > Liliales > Asparagales) >
- Dicotyledons (sorted by Family)

Explanation of symbols used here:

Scientific Name. Name of taxon. Sorted by phylogenetic group, signified by names prepended with "Group:". Hybrids are not accepted as valid taxa except for self-reproducing hybrids and traditionally accepted apomicts. Intergeneric and interspecific hybrids are indicated with an "X" in the name. **NN.** NN=1 refers to taxa considered present in Okanogan County; NN=B refers to binomial names added for context when the only observation or

collection was of a subspecific entity; NN=Q refers to taxa considered absent from the county, but indefinitely so; NN=S refers to synonyms.

Col. Col=C refers to collected names; Col=R refers to names collected or observed under a name of different rank.

Redirect. Correct synonym of an unaccepted name.

Family. Family name or group. Alternate family names within the dicots are as follows:

- Aceraceae is a subfamily under Sapindaceae.
- Ericaceae has Monotropaceae and Pyrolaceae split out as subfamilies.
- Caprifoliaceae has Linnaeaceae and Adoxaceae split out as subfamilies.
- Portulacaceae has Montiaceae and Talinaceae split out as subfamilies.
- Scrophulariaceae has Phrymaceae split out as a subfamily.

Common name. Common name of the plant where known.

Synonyms. Unaccepted synonym(s) of accepted names. Synonyms followed by [#] are collected.

This plant list can be found online at:
